

## COOL RING TRANSPORTATION METHODS

Dolly

Loaded

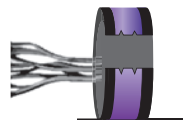

Hook

## REMOVING COOL RING

- 1 Lay tree on its side to remove the bottom fabric with a sharp pull or by severing with a shovel.

- 2 Remove the ring by pulling at the vertical seam of overlapping wire.

## LANDSCAPE INSTALLATION

- 1 Dig a hole 50% wider than the rootball on all sides.
- 2 The hole should be slightly less than the depth of the rootball. If soil is loosened below the rootball, settling may occur and the rootball could wind up lower than the soil line.
- 3 Remove all air pockets by muddying in the excavated soil while planting. Soil amendments are not normally required. Vertical sides and a wide bottom provides an improved footprint which makes the rootball less likely to shift after planting.
- 4 Follow local professional nurserymen's landscape grade and standards in tree staking and related maintenance.
